Product Description

Product Description

Factory price 500mAh 2S 7.6V 65~130C High Voltage Lipo Pack (LiHV) battery Pack for RC Drone Boat FPV

LiHV stands for "High Voltage Lithium Polymer". These batteries have been around for years and can be safely charged to 4.35V, higher than the typical voltage of Lipos.

The advantages of LiHV batteries are higher power and longer running times. LiHV batteries can be charged to 4.35V per cell, higher than normal LiPo batteries which sit at 4.20V. For example, a 4S LiHV pack charged at 4.35V would give you 17.4V. Whereas a Lipo battery on the same charge would only get 16.8V. LiHV batteries also have lower internal resistance and are less prone to puffing".

For those that love graphs, it means a straighter, longer curve. For pilots, it spells stronger throttle punches and unreal straight-up performance.

Features:

- Higher charge voltage than standard lipos
- Super high 65C discharge rate
- Perfect for high-performance models
- Higher capacity than comparable-size packs
- Heavy-duty silicone wire discharge leads
