## Packing & Delivery

The 1500mAh Transmitter pack fits snugly into most JR, Spektrum, or Futaba radios that take an 8 x AA cell battery.

With a capacity of 1500mAh, this LiFePo4 replacement for your old NiCD or NiMH will last four to five times longer. Probably the

best advantage of a LiFePo4 transmitter battery is that it will give a true voltage reading from start to finish which means you can say goodbye to the days when you thought your Transmitter was fully charged at home, only to find the voltage drop off rapidly

when at the field. LiFePo4 packs also feature a much lower self-discharge rate than the NiCD and NiMH counterparts.

With a nominal voltage of 9.9V, LiFePo4 cells are a closer match to the NiMH cells most radios were designed for.
