## Product Description

### Product Description

The advantages of LiHV batteries are higher power and longer running times. LiHV batteries can be charged to 4.35V per cell, higher than normal LiPo batteries which sit at 4.20V. For example, a 4S LiHV pack charged at 4.35V would give you 17.4V. Whereas a Lipo battery on the same charge would only get 16.8V. LiHV batteries also have lower internal resistance and are less prone to "puffing". We have a full range of Multistar High Capacity Multi-Rotor battery packs in the works and will be adding new sizes/configurations as they become available.

#### Features:

- LiHV Chemistry (Requires LiHV capable charger)
- Ultra high capacity LiPoly batteries designed specifically for multi-rotor use
- Fitted with genuine XT60 connectors
- Similar size/weight as batteries of much lower capacity, making these a direct drop-in upgrade for most multi-rotor aircraft
- Provides increased flight times of up to 30% or more when compared to standard LiPoly batteries of the same weight
- Ideal for use with aerial video and FPV multi-rotor aircraft
