Product Description

Product Description

Performance characteristics of high rate lithium iron phosphate battery:

1. Using lamination production process, it has higher performance in terms of power, discharge and life cycle.
 2. It can realize 150C pulse discharge, 90C discharge for 2 seconds, 45C continuous discharge and 5C fast charge.
 3. High temperature discharge has better temperature stability and tolerance.
 4. Ultra-thin, light in weight, flexible in size and shape, and able to adapt to various applications.
 5. The shape and capacity can be customized on demand, and the thickness can reach 0.45mm;
- Discharge curves and cycle life of high-rate lithium iron phosphate batteries at different rates

LiFePo4 batteries (lithium-ion-derived chemistry) utilize lithium iron phosphate as a cathode material which offers an exceptionally long cycle life and greater thermal/chemical stability when compared to a standard Lipoly battery.
